描述
The function of the Low Side driver shall also be configurable. The low side driver activation shall then be based on the assignment based on ‘ LSD1/2_usage_cfg ’. This has the following possible configurations: • 0x00: Not used • 0x01: LB • 0x02: HB • 0x03: DRL2 • 0x04: SBL • 0x05-0x07: Reserved NOTE: DRL2 can only be assigned to one LSD channel, If high beam is assigned to a low side driver and a HB/FTP command is requested then the appropriate channel output will be activated if IGN is in Run or Start. The Low Side Drivers duty cycles set using the parameters ‘ LSD1/2_ Duty_Cycle_cfg ’. This allows a split LB or SBL to have different intensities in different chambers. ‘ LSD1/2_ Duty_Cycle_Cfg ’ parameter definition: • Range: 5 – 100% • Resolution: 1%
