描述 The following section illustrates a possible node response frame modelled after the Part Number Reporting Frame to allow data to be transferred out of the LDM. This example DOES NOT include the J2602 status byte as the Frame is not used during vehicle operation. The supplier MAY chose to reuse the Part # Frame with the alternate IDs to reduce code development. These ID ’ s will NOT be defined for operational use to prevent field issues. clipboard-202410291420-v1r2m.png
